## Campos Joins MRB Group's Architecture Team

MRB Group President Ryan Colvin announced that Roberto Campos, AIA, CPHC, recently joined the Architecture Team at the firm's Rochester location. He is a licensed Architect accredited by the American Institute of Architects and a Certified Passive House Consultant, providing expertise on design principles used to attain quantifiable, rigorous levels of energy efficiency.

An award-winning architect, Campos has completed a number of designs and managed projects in the Syracuse and Rochester areas. His design of the Katherine D. Elliott Studio Arts Center at Hobart & William Smith Colleges in Geneva, New York, earned him a design award from the American Institute of Architects.

"We are fortunate Roberto chose to work with us at MRB Group," said Colvin. "Not only will our growing Architecture Team benefit from his creative approach to design, but our clients will appreciate his project management experience and attention to detail."

"We were certainly impressed with his portfolio and his ability to transform creative ideas into architectural plans," Colvin continued. "However, it takes much more than design capability to provide great support to clients, and we believe Roberto's accomplished body of work demonstrates a focus on client needs - and practical implementation," Colvin said. "We welcome Roberto to the MRB Group team."

Campos received early training and accreditation while in Santiago, Chile, where he worked as a registered architect. After relocating to the Finger Lakes area, he served as Lead Architectural Designer, and Project Manager, eventually becoming an architectural consultant in Rochester. At MRB Group, he will support a growing team, working with both commercial and municipal clients on a number of projects including court and municipal facilities, public works / utility buildings, park facilities, retail establishments, and medical offices.

As a Certified Passive House Consultant (CPHC), Campos can provide design options to clients considering energy efficiency.

"The term 'Passive House' is not just a residential design concept," said Campos. "Its principles can generate long-term cost savings and a substantial return on investment for a variety of structures, including commercial and municipal buildings," he stated.

"I look forward to helping clients consider the benefits of this new, science-based approach to design," Campos said.

MRB Group currently provides engineering and architecture services to more than 120 client communities across New York State, as well as to commercial businesses. With a principal focus on municipal services, MRB Group provides local governments with support for day-to-day operations, municipal planning and design for rehabilitation and maintenance of critical public assets. The firm has served the greater Rochester and Central New York areas for 91 years.
