## SHAUN LOGUE EARNS PROMOTION AT MRB GROUP

MRB Group President Ryan Colvin, P.E., recently announced that Shaun Logue, a member of the Planning Team since 2015, has earned a promotion to Senior Planning Associate.

"Working primarily to assist planning boards with review of proposed development projects, Shaun has established himself as a trusted resource to our municipal clients," said Colvin.

"His knowledge of municipal planning processes has been extremely beneficial to community leaders, who appreciate his background in operations. He understands the impacts of proposed development," Colvin continued.

"Shaun's ability to bring into focus any long-term operational costs for a local government makes his planning perspective that much more valuable to budget officers," Colvin stated. "This is one of the most important things we can do for our municipalities who are reviewing plans and proposals," he concluded.

Logue joined MRB Group's Planning Team after working for several years as Director of Zoning, Building and Code Enforcement for the City of Pawtucket, Rhode Island, where he established many initiatives to improve the permitting process for prospective developers, creating a climate to support economic growth.

Logue graduated from SUNY Albany with his Masters Degree in Urban and Regional Planning. He gained first-hand knowledge of applied land use planning, zoning, permitting, and code enforcement while working in a number of public sector environments.

"I have enjoyed working with MRB Group's client communities and helping them support good development," said Logue. "It's exciting to see the positive impacts of successful planning, especially when it contributes to the strength and vitality of an entire community," he said.

MRB Group is a Rochester-based engineering, architecture, and municipal services firm serving private and commercial clients, including more than 150 New York State municipalities. With a focus on long term sustainability, the firm assists local government leaders with community planning as well as infrastructure design, maintenance, and strategies for achieving operational efficiency.
